

## **ADULT TOTAL JOINT RECONSTRUCTIVE SURGERY FELLOWSHIPS**

OrthoCarolina Hip & Knee Center  
2001 Vail Avenue (North Caswell Entrance)  
Suite A  
Charlotte, NC 28207

The OrthoCarolina Joint Replacement Fellowship provides a comprehensive year of training in joint replacement surgery, with an emphasis on revision surgery of the hip and knee. The program offers the opportunity to participate in both clinical and basic scientific research. The program consists of preoperative clinical evaluations, a high-volume surgical experience, postoperative inpatient and long-term follow-up care. Educational conferences include a weekly preoperative templating conference, weekly attending lectures and a monthly journal club.

Special emphasis will be placed on revision hip and knee surgery. Exposure to shoulder arthroplasty, hip arthroscopy and alternative bearings are included in the fellowship. OrthoCarolina's diverse faculty provides the fellows with a well-rounded surgical experience.

With the completion of this training, the fellow will have a thorough understanding of the concepts involved in total joint arthroplasty as well as surgical expertise in both primary and revision joint replacement surgery. The fellow will also be exposed to a high-volume hip arthroscopy practice. The fellow will have a good understanding of the current literature involving joint replacements and is encouraged to complete a research project suitable for publication in a peer-reviewed journal.

Four fellowship positions are available for orthopedic surgeons who have completed an approved orthopedic residency-training program. OrthoCarolina participates in the American Association of Hip & Knee Surgeons (AAHKS) Fellowship Matching program. Please visit the AAHKS website ([www.aahks.org](http://www.aahks.org)) to download an application and find more information on guidelines and dates.
